USER PERSONAS SPECIFICATION

PERSONA 01: THE PRIMARY END-USER (RURAL CAREGIVER)

Full Name : Kasun Bandara
Age : 34
Location : Medawachchiya, Anuradhapura District, Sri Lanka
Occupation : Smallholder Farmer / Agrarian Worker
Digital Literacy : Moderate (Uses WhatsApp, YouTube, and Voice Search; struggles with complex English forms)
Role in Platform : Surrogate Caregiver managing health workflows for his father

1. Context & Background:
Kasun's 62-year-old father is diagnosed with Stage 4 CKD and requires bi-weekly hemodialysis sessions at Anuradhapura Teaching Hospital. Kasun arranges transport and accompanies his father for every session.

2. Frustrations & Pain Points:
- Lost Time: Travels 45 km by three-wheeler starting at 3:30 AM, only to wait in unpredictable hospital queues until mid-day.
- Disorganized Records: Misplaced paper lab chits cause delays during doctor consultations.
- Language Barrier: Most digital hospital forms are in English, which he cannot confidently navigate.

3. Platform Needs & Goals:
- Needs a simple Sinhala interface with high-contrast text and minimal steps.
- Wants to reserve a guaranteed morning slot in advance to plan travel.
- Wants a visual way to track his father's Creatinine values over time.

PERSONA 02: THE ADMIN & CLINICAL OPERATOR (DIALYSIS UNIT NURSE)

Full Name : Sujatha Fernando
Age : 42
Location : Teaching Hospital Anuradhapura
Occupation : Nursing Sister / Hemodialysis Unit Supervisor
Digital Literacy : Competent (Familiar with hospital desktop PCs and web browsers)
Role in Platform : Operational Administrator managing bed allocation and intake

1. Context & Background:
Sujatha supervises a 10-bed hemodialysis unit handling up to 30 patients daily across multiple shifts. She manages patient queuing, bed sanitization cycles, and manual record-keeping.

2. Frustrations & Pain Points:
- Administrative Drag: Spends over 1.5 hours per shift writing names into physical

logbooks and arbitrating line-skipping arguments.
- Patient Surges: Overcrowding occurs when patients arrive simultaneously without staggered appointments.
- Unscheduled Absences: Patients miss allocated slots without prior notice, leaving critical dialysis machines idle.

3. Platform Needs & Goals:
- Needs a clean desktop dashboard displaying real-time daily bed occupancy.
- Requires a single-tap "Check-in" button to confirm patient arrivals instantly.
- Wants automated slot visibility to eliminate corridor disputes.

==========
